

IN THE CLAIMS:

1. An apparatus for holding paint comprising:
 - a. one or more paint storage compartments for storing paint having a front, a back, a first side, a second side and a base;
 - b. a frame configured for holding the paint storage compartments; and
 - c. means for dispensing removably coupled to the paint storage compartments for dispensing paint from the paint storage compartments, wherein the means for dispensing is capable of dispensing paint without lifting the paint compartments.

7. An apparatus for storing paint comprising:
 - a. a paint storage compartment for storing paint having a front, a back, a planar first side, a planar second side and a base;
 - b. a frame configured for holding the paint storage compartment;
 - c. a lid for covering the paint storage compartment; and
 - d. a stirring assembly removably coupled to the lid for stirring the paint stored in the paint storage compartment when the lid is covering the paint storage compartment.

11. An apparatus for storing paint comprising:
 - a. a paint storage compartment for storing paint having a front, a back, a first side, a second side and a base;
 - b. a frame configured for holding the paint storage compartment;
 - c. a dispensing mechanism removably coupled to the paint storage compartment for dispensing paint from the paint storage compartment, wherein the dispensing mechanism is capable of dispensing paint without lifting the paint compartment;
 - d. a lid for covering the paint storage compartment; and
 - e. a stirring assembly removably coupled to the lid for stirring the paint stored in the paint storage compartment.

16. A reusable paint container comprising:
 - a. a paint compartment for storing paint;
 - b. a body configured for holding the paint compartment having a front, a back, a planar first side and a planar second side;

- c. a lid removeably coupled to the paint compartment having an outer side, an inner opposite side and a small aperture located through the lid from the outer side to the inner opposite side;
 - d. a stirring mechanism removeably coupled to the outer side of the lid having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the small aperture in the lid to extend into the paint compartment when the lid is positioned over the paint compartment; and
 - e. a fan apparatus removeably coupled to the rod of the stirring mechanism on the inner opposite side of the lid.
22. A reusable paint container comprising:
- a. a body having a first side and a second side, wherein the body is configured for holding paint within one or more integral paint compartments each having a front, a back, a planar first side and a planar second side;
 - b. a lid removeably coupled to the paint compartments having an outer side, an inner opposite side and a small aperture located through the lid from the outer side to the inner opposite side;
 - c. a stirring mechanism removeably coupled to the outer side of the lid having an integrally formed rod located at a central axis of the stirring mechanism, wherein the rod is positioned through the small aperture in the lid to extend into a corresponding paint compartment when the lid is positioned over the corresponding paint compartment; and
 - d. a fan apparatus removeably coupled to the rod of the stirring mechanism on the inner opposite side of the lid.
